## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of group I, species A, and claims 1-17 in the reply filed on 9/23/05 is acknowledged. The traversal is on the ground(s) that the figures depict many different mechanisms and therefore should not be restricted. This is not found persuasive because they are all different distinct embodiments of the invention and are therefore restrictable.

However after further consideration claims 11-15 have been withdrawn from further consideration as being drawn to a nonelected species.

Claims 11-13 refer to species I shown in figure 10 as to having a membrane comprising springs.

Claim 14 refers to species L shown in figure 13 as to having a membrane comprising elastic filaments

Claim 15 refers to species M shown in figures 14 and 15 as to having a membrane comprising biopores

The requirement is still deemed proper and is therefore made FINAL.

### ***Claim Objections***

Claim 17 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 17 is dependent

Art Unit: 3738

upon claim 16, but recites the exact same limitation: "wherein said elastic member substantially resides outside said body lumen."

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10, 16, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent 5,123,917 Lee.

In regards to claims 1-10, 16, and 17, Lee discloses the same invention comprising an elastic member (20) and an integral stent-anchoring member (30) that is sized and shaped so as to fit inside a body lumen. Lee teaches that the stent (30) may be disclosed on either the inside or outside of the membrane member in column 7 lines 43 through 50.

Claims 5, 6, 8, 16, and 17 are being treated as intended use, furthermore the device of Lee is inherently capable of being positioned upon and secured to the outside of a body lumen.
